

Figure S10. FOXO1 downregulation with ASO.

- Log2 fold change (FC) of gene expression downstream AKT1 in GBA-PD samples against WT.
- Representative Western Blot (WB) image showing FOXO1 protein levels after NESC treatment with customised ASOs and negative control (NC).
- Quantification of FOXO1 protein levels relative to the β-Actin in NESC samples.
- Representative WB image showing FOXO1 protein levels after midbrain organoid treatment for 28 days with ASO3 and NC.
- Quantification of FOXO1 protein levels relative to the β-Actin in midbrain organoid samples.
- Immunofluorescent staining of FOXO1 in midbrain organoids after 28 days of treatment with ASO3 and NC.
- quantification of FOXO1 positive pixel area normalised to the Hoechst pixel area.
